The SC5313A is a 400 MHz to 6 GHz direct IQ demodulator, downconverting RF signals directly to analog In-phase (I) and Quadrature (Q) IF or IQ baseband components. The frequency range of the baseband/IF output is DC to 160 MHz. The module can also be operated as a single stage downconverter. The DC-coupled differential IQ pair may be fed to any dual channel digitizer for analog to digital data conversion. The local oscillator (LO) is supplied by any external signal source capable of tuning over the range of the SC5313A (like the SignalCore SC5506A dual channel signal source). The SC5313A can daisy-chain the LO signal, allowing a single source module to drive multiple direct IQ downconverters for coherent reception.

The SC5313A has an auxiliary RF input port that may be connected to the auxiliary RF output port of SignalCore IQ modulators such as the SC5413A to aid with system digital equalization that corrects for IQ impairments associated with the device(s). The user can access internal correction DACs, applying compensation offsets to improve the demodulator linearity, IP2, DC offsets, and common mode output voltage of the differential ports. The input compression-to-noise dynamic range is typically 150 dB with noise figure less than 10 dB. IMD is less than -70 dBc for a -20 dBm input signal.

The SC5313A is designed to be paired with the SC5506A signal source to form a complete RF direct IQ demodulator/downconverter solution. It can also be configured with the SC5413A direct IQ upconverter as the core of an RF signal transceiver. The SC5313A’s high dynamic range, along with its compact size, low power consumption, and modular flexibility make it attractive for system integration into applications such as wireless device testing, software defined radio research, point-to-point radio, multichannel coherent systems, and other academic and military programs.

**Product Features**

- RF range 400 MHz to 6 GHz
- DC to 160 MHz baseband
- Noise floor < -165 dBm/Hz
- Input IP3 > 15 dBm
- DC offset calibration
- Adjustable gain > 60 dB
- Compact size
**TECHNICAL SPECIFICATIONS** (at 25°C ambient, sine waveform)

### SPECTRAL SPECIFICATIONS
RF input frequency range ............... 400 MHz to 6 GHz
IF output frequency ................. DC to 160 MHz

### AMPLITUDE SPECIFICATIONS
Input RF range .................... -160 dBm to +20 dBm
Max input (with 20 dB RF attenuation) .......... +27 dBm
RF attenuation range ...................... 0 to 60 dB
RF attenuation resolution ............... 1 dB
Gain range .............................. -30 dB to +30 dB typical
Input P1dB compression ...................... +5 dBm
IMD3 (two tones, 1 MHz apart)
(RF Amp/attenuator adjusted for 1V peak baseband)

### TERMINAL SPECIFICATIONS
RF and LO input terminals
- Impedance ...................................... 50 Ω
- Connector type .............................. SMA female
- Coupling ......................................... AC

Baseband / IF output terminals
- Impedance (single ended) .............. 50 Ω
- Connector type .............................. MCX female
- Coupling ......................................... DC
- Frequency ..................................... 10 MHz
- Amplitude ..................................... 2 V max

Communication interface ...................... USB / RS-232 / SPI
Digital interface .................................... HDMI type
Logic type ...................................... 3.3V HCT (5V tolerant inputs)
Power consumption .............................. 7 W typical
Weight .............................................. 0.9 lbs
Dimensions (W x H x D, max envelope) 0.75" x 3.75" x 5.75"
Warranty ............................................. 3 years parts and labor on defects in materials or workmanship

### ADDITIONAL FEATURES
- Auxiliary RF port for calibration usage
- Switchable LO output
- DAC control for linearity optimization, DC voltage offset, and common differential output voltage
- Switchable RF amplifier to improve SNR for low level RF signals
- User EEPROM for storage of calibration constants and settings
- Onboard temperature sensor to monitor temperature variation

### ORDER INFORMATION
7100030-01 ... SC5313A, 6 GHz Direct IQ Downconverter
Core Module – USB and SPI Interfaces
7100030-02 ... SC5313A, 6 GHz Direct IQ Downconverter
Core Module – USB and RS-232 Interfaces

Specifications are subject to change without notice. For the most recent product specifications, please visit www.signalcore.com.

---

(1) All units are factory calibrated and calibration is stored in onboard EEPROMs. The user must apply the calibration correction to the IF signal for output level accuracy to be valid.

(2) Only with sine-tone generation. Accuracies are limited by the step attenuation resolution

(3) Shown in the table are two different settings; one set for improved SNR, the other set for improved 3rd order IMD
