About Us

Founded in 2009, SignalCore, Inc. is a privately held company based in Austin, TX. SignalCore designs and manufactures high quality, instrument grade RF and microwave subsystems. We serve customers worldwide in the industries of measurement, communications, aerospace, defense, academia, and electronics manufacturing. Our extensive engineering knowledge and experience in the design and manufacturing of high performance RF and microwave solutions ensures that our products are of the highest quality and reliability in the industry.

“SignalCore provides high performance and flexible technology solutions. Our instrument grade RF and microwave subsystems are designed to meet today’s demanding applications.”
26.5 GHz RF Downconverter

USB-SPI-RS232

The SC5318A is a C to K band broadband single-stage downconverter, converting frequencies from 6 GHz to 26.5 GHz down to 50 MHz to 3 GHz. The LO frequency range is from 6 to 26.5 GHz with an input LO range from 6 to 14 GHz. An internal frequency doubler multiplies the input LO range up to 26.5 GHz. This module also features an internal 26.5 GHz synthesized LO, RF preamplifier, and variable gain control, making it a compact, standalone downconverter module.

Product Feature

Input RF Range: 6 GHz to 26.5 GHz
Gain Control: -40 to +40 dB typ
LO Phase Noise: -100 dBc/Hz @ 10 kHz, 10 GHz
Input IP3: +18 dBm typ
Noise Figure: +10 dB @ max gain
Input P1dB: 1 dB Compression typ

SignalCore is excited to announce the latest specifications on its newest product, the 26.5 GHz RF Downconverter. For a complete data sheet, visit the product page on our website.

This module can be combined with SignalCore’s 6 GHz RF Downconverter to form a broadband 100 kHz to 26.5 GHz downconverter. These high-performance converter modules are compact and rugged, built for easy integration into large systems.

With the option for an external LO signal, the SC5318A may be configured for SISO applications, or paired together for MIMO applications such as ground-based satellite communications, point-to-point radio, and test instrument systems.

Full implementation instructions, GUI, driver software, and example code are provided with each module.
Signal Sources

SignalCore signal sources are designed to meet demanding RF and microwave applications in academia, military, and commercial markets. Our broadband CW signal sources offer low phase noise performance, fast frequency locking, and fine resolution tuning, all with robust and easy to use programming interfaces.

**20 GHz Signal Source**

Designed to meet demanding high-performance applications, the SC5510A and SC5511A pack the performance of a big-box instrument into a module that fits in the palm of your hand. In these signal sources, multiple phase-locked loop architectures are employed to produce low phase noise signals. These modules are ideal for both single-stage RF conversion systems and dual-stage image suppression up and down converter systems.

Full implementation instructions, GUI, driver software, and example code are provided with each module.

These modules employ a multiple phase-locked loop architecture as well as a YIG oscillator as the heart of its synthesizer. Frequency accuracy is provided by an onboard 10 MHz temperature compensated crystal oscillator (TCXO). The SC5503B and SC5502A can be used as a standalone CW signal source or as an LO source for frequency conversion systems such as the SignalCore IQ modulators and demodulators.

Full implementation instructions, GUI, driver software, and example code are provided with each module.

SignalCore’s dual channel CW signal sources provide independent frequency generation from 25 MHz to 6 GHz. Both channels have a common internal 10 MHz TCXO reference, which can be phase locked to an external source for frequency synchronization. The SC5505A and SC5506A are designed with the intent of being paired up with SignalCore IQ modulators and demodulators to form RF transceivers. They serve well as LO sources for multiple single stage downconverters or a dual stage downconverter and are ideal choices as a clock source for fast DAC and ADC applications.

Full implementation instructions, GUI, driver software, and example code are provided with each module.
nanoSynth®

Integrated 6 GHz SMT Synthesizer

The SC800 nanoSynth® is a fully integrated broadband CW signal source combining multiple PLL, DDS, and frequency dividers into a rugged and miniature 2” x 1” surface mount package. This signal source integrates low noise linear regulators and an output RF amplifier to greatly improve the pushing and pulling performance. To simplify user communication with the device, an onboard microprocessor performs all necessary computations to control and set the output frequency, reducing the number and complexity of instruction registers.

Full implementation instructions, GUI, driver software, and example code are provided with each module.

RF Downconverters

SignalCore's RF Downconverters feature the ability to lock to a precision external reference source, allowing for subsequent digitizing and signal processing. With low phase noise, fine tuning steps, and continuous broadband coverage, these modules provide customers with the tools they need for precise frequency translation.

9.05 - 9.55 GHz RF Downconverter

The SC5360B is a dual channel, dual-stage conversion, super-heterodyne downconverter with integrated local oscillators (LOs). The module is designed as a subsystem component in customized precision test equipment [designs] and meets demanding applications such as X-band radar systems, communication systems, and spectral monitoring systems. The SC5360B is intended to ease the efforts of system engineers in creating embedded applications like signal intelligence or radar systems where the requirements demand high quality, compact RF modules.

Full implementation instructions, GUI, driver software, and example code are provided with each module.
### 6 GHz RF Downconverter

**PXIe / USB-SPI-RS232**

**Input RF Range**: DC to 6 GHz  
**Phase Noise**: -140 dBc/Hz @ 1 MHz offset, 1 GHz carrier  
**Input SNR Dynamic Range**: 150 dBc/Hz  
**Residual Spurs**: -100 dB  
**Bandwidth**: 320 MHz

With this module, SignalCore offers a compact and modular, high-performance, triple stage heterodyne downconverter. Powered by a single rail +12V supply, the SC5308A uses a YIG oscillator as its tunable RF LO, contributing negligible noise to the downconverted RF signal. For PXI users, SignalCore offers a double slot PXI Pxpath platform that has the same performance and functionality as the stand alone core module.

Full implementation instructions, GUI, driver software, and example code are provided with each module.

### 6 GHz Direct IQ Demodulator

**PXIe / USB-SPI-RS232**

**Frequency Range**: 300 MHz to 6 GHz  
**Noise Floor**: -165 dBm/Hz  
**Adjustable Gain**: 60 dB  
**Input IP3**: 20 dBm  
**Attenuation Range**: 0 to 60 dB

The SC5312A and SC5313A are 300 MHz to 6 GHz direct IQ demodulators, down converting RF directly to analog In-phase and Quadrature IF or IQ baseband. The DC coupled differential IQ pair may be fed to any dual channel digitizer for analog to digital data conversion. The local oscillator (LO) is supplied by an external source (such as the 6 GHz Dual Channel Signal Source) and its replica may be used to drive another direct IQ downconverter for coherent reception. These modules can also be configured together as an RF signal transceiver.

Full implementation instructions, GUI, driver software, and example code are provided with each module.
3.9 GHz RF Downconverter

**Input RF Range** 1 MHz to 3.9 GHz

**Image Rejection** 120 dB

**Phase Noise** -107 dBC/Hz @ 10 kHz offset, 1 GHz carrier

**Input SNR Dynamic Range** 150 dBC/Hz

**Residual Spurs** -100 dB

**Signal Bandwidth** 10 / 20 / 40 MHz

The SC5305A and SC5306B are three-stage superheterodyne downconverters that deliver superior image rejection over single stage conversion. These products have both high signal-to-noise dynamic range and high spurious free dynamic range. This range is achieved by using low noise linear amplifiers, low loss mixers, and high performance solid state attenuators.

Full implementation instructions, GUI, driver software, and example code are provided with each module.

**RF Upconverters**

SignalCore RF Upconverters are designed to meet today’s demanding wireless applications. They are high performance devices that can be easily integrated into many signal generation systems. They are well suited to pair up with our RF downconverters to form transceiver pairs.
6 GHz RF Upconverter

The SC5407A and SC5408A use superheterodyne topology while exhibiting low phase noise, high dynamic range, excellent flatness response, and low spurious content. These modules are easily integrated with standard communication interfaces, and come with extensive Windows, LabVIEW, and C/C++ support, simplifying the task of building customized systems. Driver and development software is provided, as well as a software GUI that allows users to easily control the device without having to write control software.

Input RF Range: DC to 6 GHz
Phase Noise: -140 dBc/Hz @ 1 MHz offset, 1 GHz carrier
Output SNR Dynamic Range: 150 dBc/Hz
Output Levels: -110 dBm to 15 dBm with 0 dBm at input
Bandwidth: 320 MHz

6 GHz Direct IQ Modulator

The SC5413A and SC5412A are 400 MHz to 6 GHz direct IQ modulators upconverting analog In-phase and Quadrature IF or IQ baseband directly to RF. Each module can also be operated as a single stage upconverter. The DC coupled differential IQ pair may be driven by any dual channel baseband source such as a dual channel arbitrary waveform generator. The local oscillator (LO) is supplied by an external source (such as the 6 GHz Dual Channel Signal Source), and its replica may be used to drive another direct IQ upconverter for coherent transmission.

Frequency Range: 400 MHz to 6 GHz
Analog Baseband: DC to 160 MHz
Output SNR: 140 dB
Output IMD: -70 dBc
Attenuation Range: 0 to 90 dB

Full implementation instructions, GUI, driver software, and example code are provided with each module.
3.9 GHz RF Upconverter

PXIe / USB-SPI-RS232

- Input RF Range: 1 MHz to 3.9 GHz
- Image Rejection: 120 dB
- Phase Noise: -107 dBc/Hz @ 10 kHz offset, 1 GHz carrier
- Output SNR Dynamic Range: 150 dBc/Hz
- 3rd order intermodulation: 70 dBc at 0 dBm output level
- Signal Bandwidth: 20 / 40 MHz

As part of our commitment to offer products across multiple configurations, SignalCore offers a three-stage, high dynamic range, superheterodyne upconverter for PXI Express. Designed to convert low frequency broadband IF signals to higher RF signals, the SC5405A has 3rd order linearity and noise performance to rival direct conversion devices without the inherent image and in-band LO leakages. The SC5405A is highly configurable to suit the intended application and can be configured as a 1 MHz to 3.9 GHz sine-tone generator with an add-on feature. This product is also available as a standalone core module.

Full implementation instructions, GUI, driver software, and example code are provided with each module.

Quality Commitment

SignalCore is committed to quality and compliance worldwide in meeting customer expectations and developing high-quality products, through a well maintained quality management system. To demonstrate commitment to quality, SignalCore is ISO 9001:2015 certified and all products are manufactured to be fully RoHS compliant.
